

SAFETY SWEEP

No More Slips & Falls

FLOOR SWEEP & ABSORBENT

For removing "grease & oil only" from commercial kitchen floors

What is it?

SAFETY SWEEP is the only dry phase hydrophobic ceramic absorbent that will remove grease and oil from hard surfaces without the use of water. SAFETY SWEEP will not pick-up water, but does extract oil and grease from the water. SAFETY SWEEP is a risk management tool that quickly removes grease and reduces liability for slips & falls.

SAFETY SWEEP is comprised of an engineered ceramic (patent pending) containing a soft scrubbing exterior with internal chambers that lock in grease and oil. The exterior is wetted with d'limonene (an orange peel extract) which provides natural odor reduction and promotes pest control.

How does it work?

SAFETY SWEEP is simply sprinkled over the affected area – swept – and disposed of. The result is an immediate and significant increase of the floor's co-efficient of friction. The process is completed in minutes and provides a quick fix for employee floor safety (particularly during rush hours). No mop bucket – cones – pushing greasy water – extended work stoppage - or waiting for the floor to dry!

SAFETY SWEEP's unique water repelling design enables the product to continue moving on the floor when water is present with oil and grease. Otherwise, the absorbent would wet-out and create a mess. However, SAFETY SWEEP will not only broom from dry to wet but will also remove unwanted oil and grease from the water.

SAFETY SWEEP is also designed for routine removal of oil and grease "down under" fryers, counters, or other equipment (hot spots for inspectors). Significant labor savings, reduced liability, and clean results are achieved.

What do you do with the "spent" powder?

SAFETY SWEEP when applied on fats, oils, and grease will lock and contain the source and hydrocarbons. SAFETY SWEEP has been clinically tested and is considered non-leaching for landfills based on typical cleaning procedures. It has also passed *Paint Filter Testing protocols along with an extensive TCLP. In most cases you may simply discard in common garbage.

*Test America independent lab results available upon request. Always follow local, state, and federal guidelines.

Is SAFETY SWEEP considered to be a "green product"?

SAFETY SWEEP is a 100% all natural earthen product. It is made from a combination of minerals found beneath the earth and citrus. SAFETY SWEEP should be implemented into best management plans.

Is SAFETY SWEEP new technology?

Yes. SAFETY SWEEP was designed specifically to resolve issues no one else has been able to achieve. There has never been a product like this nor is there anything that comes close to meeting the performance, features, and benefits of SAFETY SWEEP.
